The above is a plat of a survey made by me for Pete Goering, Dec. 19, 1939, to locate the south line of the $N_{\rm E}^2$, NW, NW, Sec 19-19-4 as shown. As the corner stones were not readily found I took the center of the road on the north side which I found to be fifty feet between hedges. It will be noted that the east side of the quarter is quite short which is shown by the sharp angle in the road at the half mile point.

The SN-SE & NE connected by gain.
The SN-SE & NE connected in marked with steel reasonable flags at

one of their sides. The SE comer is
at the crack location to the

acher two are in live I mi the fence line.
